Streamline Ergonomic Evaluations in Laboratories with Cartevía

Sausalito, CA — June 8, 2011 — [Remedy Interactive](#), Inc., a leading provider of enterprise software solutions that help organizations prevent [workplace injuries](#), today announced the release of a [laboratory ergonomics](#) module for [Cartevía](#), a new software product that enables organizations to streamline and standardize health and safety processes. This new Cartevía module, designed to automate the entire ergonomic evaluation process in laboratories and other testing and research environments, allows ergonomists to eliminate time spent on administration, scheduling and documentation, and enables them to spend more time preventing workplace injuries. The laboratory module is the newest in Cartevía's suite of ergonomics program management solutions, which also includes a module for [office ergonomic evaluations](#).

How Cartevía Adds Value in Laboratories

Administering and managing ergonomic evaluations for an entire workforce can be time-intensive, inefficient and costly. Laboratories are especially complex environments for ergonomics, with employees working at multiple stations, sitting or standing, and using laboratory-specific equipment such as pipettes and microscopes. Cartevía allows a program manager to create efficiency across their ergonomics team, resolve common issues that result from working in this environment, and ensure that laboratory employees are working as safely and comfortably as possible.

How Cartevía Works

Unlike other solutions, Cartevía is the first software that goes beyond simply collecting and storing ergonomic evaluation data. The software uses [business process management](#) and team management functionality to enable key ergonomic evaluation processes across the entire organization and provide richer insight into the

evaluation program, so the program manager can make more informed decisions more efficiently. Designed in collaboration with leading ergonomists, health and safety experts in Fortune 500 companies, Remedy Interactive's [Injury Prevention Council](#), and the company's experts in automating injury prevention, Cartevía's ergonomic evaluation benefits and features include:

- **Increasing Administrative Efficiency** – The Administrator Dashboard provides a complete overview of all in-person evaluation activity throughout the organization, allowing a manager to see the status of all employee evaluations and individual record details, and to ensure that nothing falls through the cracks. Administrators can easily measure program progress and returns on investment.
- **Standardizing Evaluation Processes** – The Case Flow tool guides the relevant individuals through each step in an optimized evaluation process so that they always know where they are and what action comes next. Cartevía implements a standardized ergonomic process, thereby eliminating extraneous time-consuming processes. In addition, new evaluators can be integrated into the program seamlessly without affecting overall program quality.
- **Fostering Accountability** – The Case Scheduler automates the scheduling process for in-person evaluations, communicates tasks and deadlines to team members, and monitors completion of tasks. This creates a sense of responsibility amongst the team and consistently drives evaluations to completion.
- **Centralizing Recordkeeping** – The Ergonomics Worksheet allows an evaluator to capture and record all ergonomic evaluation information in an easy-to-use format to ensure the highest level of accuracy and prevent the loss of critical information. With a laptop, tablet computer or iPad, this form can be used during the actual evaluation, eliminating the need to transfer the findings from paper notes to electronic records. The information can easily be shared with other stakeholders, and can be accessed at any point in the future, even after the case has been closed.
- **Adapting to Evolving Processes** – Organizations establishing a new ergonomic evaluation program as well as organizations with tried and true processes for managing their ergonomic evaluation program will both benefit from Cartevía's flexible business process management architecture and Remedy Interactive's professional services.

“For the past 10 years, we have been developing deep expertise in software development and business process implementation by automating and scaling complex [office ergonomics](#) programs across the world’s largest organizations. Now we’re applying what we’ve learned to non-office environments,” said Kim Weiss, CEO of Remedy Interactive. “We’re excited about upcoming plans to develop Cartevía modules that streamline and automate broader health and safety processes including safety audits and inspections, to round out our workplace injury prevention solutions portfolio.”

Cartevía for laboratories is available now. Call 415-331-4646 for more information.

About Remedy Interactive, Inc.

Remedy Interactive, Inc., headquartered in Northern California, delivers a comprehensive suite of software solutions to help organizations prevent workplace injuries, reduce injury-related costs, and increase productivity and profitability. For more information, visit: www.remedysinteractive.com.
